Psychopharmacology (80103) is an intensive two day course offered yearly. It is required and may be taken any time after successful completion of Advanced Physiological Psychology.

¹ Core content area course. All five must be taken.

² This is a model. The course sequence is invariant, and thus followed by all clinical students, through Fall Year 2. Some core content and elective courses are offered on a three-year rotational basis, and thus after Fall Year 2, a student's schedule may not be identical to this model. Students may plan their sequence of study by referencing the course rotation schedule available at: <http://www.jjay.cuny.edu/academics/2124.php>.
